

### Winterisation of Drilling Rig

Locker Heatshielding limited were contacted in July 2017 with a requirement to assist a customer in providing thermal insulation for an upcoming winter drilling campaign in North America.

It was decided that the best way to achieve this was to install Locker fabric Heatshields around the affected areas to retain heat within the installation and protect against the harsh environmental conditions.

In total there were three separate areas to protect which were the Cantilever Area, Moonpool and Cellar Deck.

Vertical curtains currently being installed at the cantilever area with access doors incorporated into the shields to allow for personnel access. The Cantilever area is to be protected with two shields 9m wide x 7m tall which are ratcheted at the top and bottom of the shields.
